JOINT PRESS RELEASE

CBI and Boomitra bring carbon footprint insights and voluntary soil carbon removal to everyday banking

ANTALYA, TÜRKİYE, November 18, 2026 — Commercial Bank International (CBI) and Boomitra have partnered to give CBI clients a view of their estimated carbon footprint and voluntary access to Boomitra's verified soil carbon removal credits through their monthly banking statement experience. The partnership connects everyday banking with an opportunity to support verified carbon removal through regenerative agriculture.

CBI's Carbon Footprint Report presents estimated emissions by spending category, helping clients understand the climate impact associated with their purchases. It also provides practical guidance and access to a voluntary carbon credit purchasing option through Boomitra.

Clients can use the report to consider changes to their spending and, if they choose purchase carbon removal credits.

For CBI, the partnership brings its sustainability ambitions into a regular customer interaction. It reflects the UAE bank's emphasis on innovation through specialist partnerships and its stated alignment with the UAE's Net Zero by 2050 vision. By incorporating carbon information into the statement experience, CBI aims to make sustainability more relevant to customers' financial decisions.

Giovanni Everduin, Chief Strategy & Innovation Officer, Commercial Bank International said: "A bank statement tells you what you spent. But it rarely tells you the estimated carbon impact of that spending. Our statements now offer that perspective, giving customers an estimate while leaving the decision on what to do next entirely in their hands. Through our partnership with Boomitra, we are bringing carbon removal expertise, supported by measurement and independent auditing, into our customers' everyday banking experience. That is how CBI approaches innovation: by identifying partners with specialised expertise and making their solutions accessible through the channels our customers already use. We strongly support the UAE's sustainability ambitions. By bringing sustainability insights into the monthly bank statement, we are taking a practical step towards making environmental awareness part of everyday life and helping customers make more informed choices."

Boomitra works with over 100,000 farmers and ranchers across 10 million acres in North America, South America, Africa, and Asia. It supports farming practices, including cover crops and improved grazing, that help restore soil health and store carbon absorbed from the atmosphere. Boomitra uses satellite data, artificial intelligence, and soil data to measure changes in soil carbon. Each soil carbon removal credit represents one metric tonne of carbon dioxide equivalent (CO_2e) removed from the atmosphere and independently verified. Farmers and ranchers receive the majority of revenue from carbon credit sales, providing income to support their work on the land.

Aadith Moorthy, Founder & CEO of Boomitra, said: "Our vision is to restore agricultural soils and remove carbon for the benefit of people and the planet. Farmers and ranchers are central to that work, and carbon finance rewards their investment in healthier land. Through CBI, we are connecting banking customers with verified carbon removals and the agricultural communities whose land stewardship makes those removals possible."

Together, CBI and Boomitra are connecting everyday banking with the restoration of agricultural land. By directing voluntary customer purchases toward verified soil carbon removal, the partnership helps finance farming practices that draw carbon from the atmosphere and rebuild healthier soils, with lasting climate progress rooted in the livelihoods of the people caring for the land.

About Commercial Bank International

Commercial Bank International (CBI) is a UAE bank serving individuals and businesses. It combines banking services with a focus on customer relationships and innovation. CBI works with specialist partners to develop customer experience and advance its sustainability ambitions in alignment with the UAE's Net Zero by 2050 vision. Visit www.cbiuae.com.

About Boomitra

Boomitra is a soil carbon project developer and climate solutions company working with more than 100,000 farmers and ranchers across 10 million acres in North America, South America, Asia and Africa. Using AI, satellite remote sensing and soil sampling, Boomitra measures and monitors soil carbon removals and connects land stewards with global voluntary and compliance carbon markets.

Its projects are independently verified under leading carbon standards and support healthier soils, greater resilience to drought and erratic weather, and additional income for farming and ranching communities. Boomitra won The Earthshot Prize in 2023. Learn more at boomitra.com.
